

Guide to jewellery measurements

We have put this measuring guide together to ensure that you can have complete confidence when ordering your new rings or bracelets from Argento. Please follow the step-by-step instructions for measuring both your finger and wrist

Ring sizes:

To ensure proper ring measurement please print this page and cut out the measuring aid shown beneath. Be sure to check that the measuring aid is 100mm in width when cut out.

3 step measuring guide

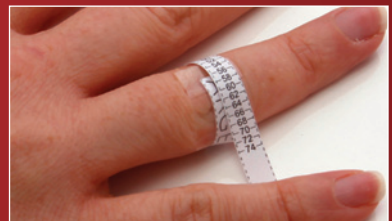

Step 1

Stick a 2cm piece of sellotape on to the left hand end and stick to the middle of your knuckle.

Step 2

Wrap the paper around your finger very tightly and measure your knuckle size.

Step 3

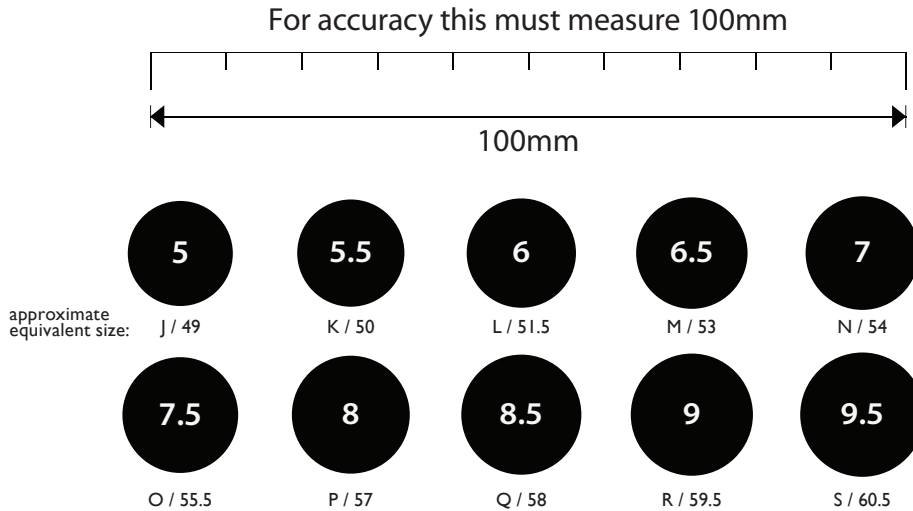

Do the same thing but this time where the ring would sit on your finger. Make a note of the measurements for discussion with us.

Please find alternative ring measurements and conversions on the next page.

Guide to jewellery measurements

Alternative ring sizes: *If you would like to measure an existing ring we have provided a circumference guide below that can be used to assess the correct ring size.*

Bracelet sizes:

For determining bracelet sizes we advise that you simply measure your wrist with a conventional tape measure. Once you have this measurement we suggest adding an extra 2cm for comfort. If the bracelet is more than 2cm longer we can adjust the fit by taking out links.
